

01 THE ONE-LINE PITCH

What PropPulse is, in a sentence you can say at the door

"It's an AI sales assistant for your property business — it answers every enquiry from 99acres, MagicBricks, Facebook and your website within seconds on WhatsApp, tells your team which leads are hot, and chases every follow-up automatically so no deal slips."

Real-estate agencies in India don't have a *lead* problem — they pay portals and run ads for plenty of leads. They have a **speed and follow-up** problem. A buyer enquires on three projects at once; whoever calls first usually wins. If your agent is showing a flat, at lunch, or asleep, that lead cools — and the money you spent to get it is wasted. PropPulse closes that gap with software instead of hiring more people.

02 WHY THEY'LL PAY

The problem we sell against

Three leaks quietly drain every agency. PropPulse plugs all three — and that's the whole ROI story.

LEAK 01

Slow first response

The average portal lead waits hours for a callback. Buyers move on to the developer or broker who replied in the first minute. Ad money spent, lead lost.

LEAK 02

Dropped follow-ups

"I'll call them tomorrow" becomes never. Warm leads sit in a WhatsApp scroll or a notebook and go cold with zero system to chase them.

LEAK 03

No idea who's hot

Agents treat every enquiry the same, spending time on window-shoppers while a ready, loan-approved buyer waits in the same list.

One extra booking a year **pays for the whole system** — several times over.

A single ₹1 crore flat earns the agency roughly ₹2–5 lakh in brokerage. PropPulse costs a one-time setup plus a modest monthly fee. If it rescues even **one** deal that would otherwise have leaked, it has already paid for a year. Everything after that is margin. That is the entire sales argument — you're not selling software, you're selling recovered bookings.

03 HOW IT WORKS, END TO END

The value loop every lead runs through

This is the spine of the product. When you demo, you're showing this loop firing on a real lead in front of the client.

01

Capture

Every lead from 99acres, MagicBricks, Housing, Facebook, website & WhatsApp lands in one inbox.

02

Respond

An AI WhatsApp reply goes out in under a minute — personalised to the project & budget.

03

Qualify

AI scores the lead Hot / Warm / Cold with intent, timeline and a next action.

04

Nurture

Follow-up agents chase quiet leads and book site visits — automatically.

05

Close

The deal moves through a visual pipeline to Booked, with value tracked in ₹.

04 INSIDE THE PRODUCT

Every screen, and what it does for the client

Walk these in order in a demo. For each, the “sell” line is what you actually say to the agency owner.

Dashboard

/

The owner’s cockpit: leads captured, average first-response time (with the “4 hrs → 45 sec” before/after), conversion rate, live pipeline value in ₹, leads rescued from going cold, and revenue attributed — plus charts for leads-by-source, the pipeline funnel and response-time trend.

Say: “In one glance you see how fast your team is responding and how much money is live in your pipeline right now.”

Leads Inbox

/leads

Every enquiry in one list with a coloured source badge, the AI score, tier, current stage and the assigned agent. Sortable so the team works the hottest leads first.

Say: “No more leads scattered across portals, email and three WhatsApp numbers. Everything’s here, ranked.”

Lead Detail

/leads/:id

The AI qualification summary (budget, locality, intent, timeline), the full WhatsApp conversation thread, an AI-suggested reply the agent can edit and send, a “book site visit” action, and a complete activity timeline.

Say: “Your agent opens one screen and knows exactly who this buyer is and what to say next — the AI already drafted it.”

Pipeline

/pipeline

A visual Kanban board — New → Qualified → Site Visit → Negotiation → Booked → Lost. Move a deal a stage and the dashboard value updates instantly.

Say: “This is your whole sales team’s week on one board. Nothing hides in someone’s head.”

AI Agents

/agents

A roster of five specialist AI agents — each with a job, a live count of actions taken, and a “Run now” button. This is the “superpower” screen (detailed in section 05).

Say: “Think of these as five tireless junior staff who never sleep, never forget, and cost you almost nothing.”

Automations

/automations

Six always-on automations with on/off toggles and run counts: instant reply, AI qualification, follow-up drip, site-visit reminder, cold-lead reactivation, and a marketing engine (roadmap).

Say: "These run 24×7 in the background. You switch on what you want; the system does the rest."

✨ Copilot

floating · every page

A chat assistant in the corner of every screen that reads the whole CRM and takes real action on command — "give me a pipeline summary", "send a follow-up to all hot leads in Pune", "book site visits for my top 3". It actually does it, then shows what it did.

Say: "Talk to your CRM like you'd talk to your best sales manager — and it executes."

⚡ Simulate Lead

top-right button

The money shot. One click injects a fresh portal lead and plays the whole chain live — capture → AI score → auto WhatsApp reply → lands in the pipeline — in about two seconds, on screen.

Say: "Watch — a lead just came in from 99acres..." then click. Nothing sells like seeing it fire.

05 THE SUPERPOWER

The AI layer — five agents, one Copilot

This is what separates PropPulse from an ordinary CRM. Each agent is a role with its own toolkit; together they run the sales desk.

Lead Qualifier

REAL-TIME · AI SCORING

Reads each new enquiry and assigns a Hot / Warm / Cold score with intent, timeline and a recommended next action — so the team works the best leads first.

Instant Responder

REAL-TIME · WHATSAPP

The moment a lead lands, drafts and sends a personalised WhatsApp reply. No enquiry ever waits while a competitor calls first.

Follow-up Agent

SCHEDULED · NURTURE

Finds leads that replied but are still waiting on us and sends a timely, personalised nudge — the classic dropped follow-up, plugged.

Site-Visit Scheduler

REAL-TIME · BOOKING

Spots hot, qualified leads with no visit booked and schedules one, with an automatic WhatsApp confirmation and reminder.

Sales Copilot

ON-DEMAND · CONVERSATIONAL

Ask it anything — summaries, hottest leads, bulk follow-ups — and it reads the CRM and takes real action from the ✨ chat.

Add your own

CONFIG, NOT CODE

A new agent is one entry in a config file — a role, a toolkit, a trigger. This is exactly how the same product re-points to any business (section 08).

It stays live even if the internet drops.

The AI is **provider-agnostic**: it runs on OpenAI (GPT-4o-mini) or Anthropic (Claude), and if a key ever fails or a network hiccups mid-demo, it falls back to a built-in engine that still performs real actions. Translation for the client: **the demo can't break**, and you're never locked to one AI vendor's pricing.

06 UNDER THE HOOD (PLAIN LANGUAGE)

What it's built on — and what “phase 2” means

You don't need to be technical to sell this, but here's the honest picture so you're never caught out. PropPulse is a modern web app — it runs in any browser, nothing to install for the client. It's built on **Next.js** (the same framework behind many production apps), with a clean database underneath and charts drawn with a proper data-viz library. The AI features call OpenAI or Claude live.

In the demo, WhatsApp is shown as a realistic in-app chat thread and leads are seeded with realistic Mumbai / Pune / Bangalore projects and ₹ budgets — so every screen looks live from the first second. When a client signs, **phase 2** is the paid integration work that makes it their real business:

PHASE 2

Real WhatsApp

Connect an official WhatsApp Business number via a provider (AiSensy, Gupshup, Meta Cloud API or Twilio) so replies go to real buyers.

PHASE 2

Portal & ad feeds

Live hooks from 99acres, MagicBricks, Housing and Facebook Lead Ads so enquiries flow in automatically, not by hand.

PHASE 2

Their data & team

Import their existing leads, add each agent with a login, and brand the whole system with the agency's name and colours.

The honest framing for clients: what you're showing today is the complete working product on demo data. Setup is where we connect it to *their* WhatsApp, *their* portals and *their* team – that's the value in the setup fee, and it's deliberately not a five-minute job.

07 HOW WE PACKAGE & PRICE

What the client pays, and what they get

A one-time setup fee to build and connect their system, plus a monthly fee that covers the running costs and support. Figures below are the starting frame — adjust per client size.

STARTER SETUP

₹50,000 one-

time

- ✓ Branded CRM with their name & colours
- ✓ One WhatsApp Business number connected
- ✓ Up to ~5 agents onboarded & trained
- ✓ Existing lead data imported
- ✓ Core automations + all 5 AI agents live

MOST POPULAR

PRO SETUP

₹1,00,000 one-

time

- ✓ Everything in Starter
- ✓ Portal & Facebook lead-feed integrations
- ✓ Custom pipeline stages & automations
- ✓ Larger team, multiple projects
- ✓ Priority onboarding & tuning

MONTHLY RETAINER

example
₹10k–20k /

month

- ✓ WhatsApp Business API messaging
- ✓ AI usage (scoring, replies, Copilot)
- ✓ Hosting & maintenance
- ✓ Ongoing support & small changes
- ✓ New agents / automations on request

Anchor every price to **one recovered booking**.

Before you say a number, establish the math: “What does one closed flat earn you in brokerage?” Once they say ₹2–3 lakh, the ₹50k–₹1L setup sounds small — because it is, against a single deal the system will save them this quarter.

08 THE BIGGER OPPORTUNITY

The same engine sells to any business

This is why the product is a platform, not a one-off. An “agent” is just a role + a toolkit + a trigger held in a config file. Swap the roster and PropPulse becomes a different product — the CRM, screens and Copilot don’t change.

Real Estate

Lead Qualifier · Instant Responder · Site-Visit Scheduler — the build you’re demoing today.

Clinics

Appointment Booker · No-show Recovery — fill the calendar, win back cancellations.

Gyms & Salons

Membership Renewal · Win-back Agent — chase renewals and lapsed members automatically.

Dealerships

Test-Drive Scheduler · Finance Follow-up — same loop, applied to car buyers.

How to use this on a visit: if the person you’re meeting isn’t in real estate – or knows someone who runs a clinic or gym – the pitch is identical. “We built this for property, but it’s really a lead-response engine. We can point it at your business the same way.” That’s how one demo becomes many deals.

09 RUN THE ROOM

The 5-minute demo script

Open **start-demo.bat** first — it launches the server and opens the browser. Keep the black window open. Then follow these beats.

1 Open on the Dashboard.

Say: *"This is your whole business on one screen — how fast you're answering leads, and how much money is live in your pipeline right now."*

2 Click ⚡ Simulate inbound lead.

Say: *"A buyer just enquired on 99acres..." — let them watch the capture → score → instant WhatsApp reply → pipeline chain fire. This is the moment that sells.*

3 Open that lead's detail.

Say: *"The AI already qualified them and wrote the reply. Your agent just reads and hits send."*

4 Go to AI Agents, hit "Run now" on Follow-up.

Say: *"These five agents work your leads around the clock. Watch — it just followed up with everyone who was waiting on us."*

5 Open the ✨ Copilot, type a real request.

Say: *"And you can just tell it what to do." Try "Give me a pipeline summary" or "Send a follow-up to all hot leads in Pune."*

6 Land on the money line.

Say: *"Everything you saw runs on your real WhatsApp and portals once we set it up. If it saves you one booking, it's paid for the year. Shall we get you started?"*

If anything looks stale mid-demo, click **Reset demo** (top-right) to restore the clean 42-lead dataset – safe to press anytime.

10 BE READY FOR THESE

Handling the questions they'll ask

"Is this just a chatbot?"

No. A chatbot only talks. PropPulse *acts* — it scores leads, sends replies, moves deals, books visits, and gives the owner live numbers. It's a full sales system with AI staff inside it.

“Will it really message on WhatsApp?”

Yes, on an official WhatsApp Business number we connect during setup via a licensed provider. In the demo it’s shown as a chat thread so you can see exactly how it behaves.

“We already have a CRM.”

Most CRMs are just a database people forget to update. Ask: “Does yours reply to a lead in 45 seconds and follow up on its own?” That’s the difference — this one does the work, it doesn’t just store it.

“What does it cost to run?”

The monthly fee covers WhatsApp messaging, AI usage and support. It’s a small, predictable number against the brokerage on a single deal — and we size it to their volume.

“How long to set up?”

The product is ready today. Setup is connecting their WhatsApp, portals, team and data — typically a short, guided onboarding, which is what the setup fee covers.

PropPulse · AI Lead-to-Deal CRM — internal product & sales playbook

Demo: **start-demo.bat** → localhost:3000
